

Small Wheel Loader

- Machine and Jobsite Safety
- Operator Compartment and Control familiarization
- Machine Walk around to locate and identify major components, controls and gauges
- Stockpiling
- Loading and Carrying
- Backfilling
- Using Forks Work tool
- Operational techniques

Machine Walkaround. Learn pre-operation machine inspection procedures to ensure proper operating condition.

Controls Familiarization. Learn and understand operator controls.

Driving. Learn basic movements of the machine using the steering wheel. The operator will learn proper bucket placement while maneuvering around a job site.

Load and Carry. Using the standard commercial bucket the user will learn to load material at a stockpile and unload it at a highwall pit.

Stockpile. Learn basic stockpiling procedures.

Truck Loading. Learn proper loading and V-pattern techniques; as well as using proper procedures to load a dump truck.

Truck Spotting. Learn proper loading and V-pattern techniques; as well as spotting a dump truck for loading.

Backfilling. Learn to backfill a trench using the commercial bucket attachment.

Multipurpose Bucket - Backfilling. Learn to backfill a trench using the multipurpose bucket attachment by using the bottom of the bucket as a blade.

Multipurpose Bucket - Carry Objects. Learn to pick up and carry objects using the multipurpose bucket attachment.

Quick Coupler - Bucket/Forks. Learn to change work tools using the Quick Coupler feature on the machine.

Unloading Pallets - Forks. Learn to unload pallets with the forks attachment.

Open Training. Allows instructor to expand functionality of simulator to customize training for each student according to individual needs
